			nformation معلومات الماد	n			
Module Title	MATHEMATICS II			Modu	le Delivery	7	
Module Type		CORE	XL]		⊠ Theory		
Module Code		COM12106	• X		□ Lecture □ Lab		
ECTS Credits	×	6	X		☐ Lab ☑ Tutorial □ Practical □ Seminar		
SWL (hr./sem)	7	150					
Module Level		UGI	Semester (s) offered		2		
Administering Department		BSc COMM	College Al-Mansour		ansour Ur	niversity College	
Module Leader	Module Leader		e-mail	1	1 5		
Module Leader's Acad. Title			Module Le Qualificati				
Module Tutor		e-mail	- Con	Y			
Peer Reviewer Name			e-mail				
Review Committee Approval		13/6/2023	Version Number			1.0

	earning Outcomes, Indicative Contents and دة الدراسية ونتائج التعلم والمحتويات الإرشادية مع وصف		ption		
Module Aims أهداف المادة الدر اسية	This module aims to provide students with an understanding of, and competence in the use of, mathematical techniques that are relevant to the solution of engineering problems. It will also give students a firm foundation from which to develop solutions to a wider and deeper range of engineering problems that they				
Module Learning Outcomes مخرجات التعلم للمادة الدراسية	 will encounter throughout their undergraduate engineering program of study. Integration: Demonstrate an understanding of the fundamental concept of integration and antiderivative including types of integrations Integration and transcendental functions: Extend the concept of integration to cover the integration of different types of transcendental functions Numerical integration: Explain the fundamentals of numerical integration focusing on trapezoidal rule and Simpson's rule. Methods of integration: Apply the techniques of integration to evaluate the integrals that cannot be solved directly. Application of definite integrals: Extend the concept of integration to solve several problems involving area, volume, length of curve, surface area by revolution, center of mass and moment of inertia. Area with polar coordinates: Demonstrate an understanding of polar coordinate system and its difference with Cartesian coordinate system, graphing and problems solution of such system. Matrix: Explain the concept of matrix in mathematics, matrix algebra and 				
Indicative Contents المحتويات الإرشادية	 solution of system of linear equations. The topics listed under the indicative content below are the underpinning areas of knowledge and understanding that will be obtained from successful completion of the module. The mathematical topics are illustrated in the context of relevant engineering scenarios. 				

Course Description	 Integration: Definition, antiderivative, definite and indefinite integral. Integration and transcendental functions: integration of trigonometric and inverse trigonometric functions, integration of hyperbolic and inverse hyperbolic functions. Numerical integration: Introduction, trapezoidal rule and Simpson's rule. Methods of integration: Substitution method, integration by parts, Trigonometric substitution method, integration by partial fraction. Application of definite integrals: Area, Volume, Lengths of curves in the plane, Areas of surfaces of revolution, Center of mass, moment of inertia. Area of polar coordinates: Definition, polar equation, relating polar and Cartesian coordinates, Graph in polar coordinates applications using polar coordinate system Matrix: definition, matrix algebra, Determinant of matrix, Grammar's rule, Inverse of matrix, Gauss Elimination Method This course discuss the foundation for a robust understanding of mathematical concepts that underpin the various disciplines within engineering. It covers the integration is also highlighted. Students will be able to utilize integration is also highlighted. Students will be able to utilize integration to solve several problems such as area between curves and volume by revolution. A focus is also given to the understanding of polar coordinate system				
	and how to graph the curves and solve difficult integral in an easy way using such system. Matrix topic is also covered in this course so the students will be able to solve system of linear equations using matrix in different approaches. By the end of the course, students will have a sound understanding of these principles, preparing them for more advanced engineering courses in their respective fields				
	Learning and Teaching Strategies استر اتيجيات التعلم والتعليم				
	Begin In Mathematics II, then employ a range of teaching strategies to ensure				
	first-year engineering students fully grasp the various mathematical concepts.				
Strategies	Instructional methods include interactive lectures, where core mathematical principles are explained in detail, and practical problem-solving sessions to				
Strategies	principles are explained in detail, and practical problem-solving sessions to provide hands-on learning experiences. Collaborative group work encourages				
	peer-to-peer learning and reinforces understanding through shared insights.				
	Regular formative assessments will be conducted to monitor students'				

understanding of the material, and feedback will be promptly given to guide their					
learning process. Instructors will maintain office hours for personalized support,					
and online resources will be available to supplement classroom instruction.					
Emphasis will be placed on relating mathematical concepts to real-world					
engineering applications to make the learning experience more relevant and					
engaging. These strategies aim to develop students' critical thinking skills,					
enhance their problem-solving abilities, and prepare them for advanced					
engineering studies.					

Student Workload (SWL)						
الحمل الدر اسي للطالب						
Structured SWL (h/sem)	78	Structured SWL (h/w)	5.2			
الحمل الدر اسي المنتظم للطالب خلال الفصل	10	الحمل الدر اسي المنتظم للطالب أسبو عيا	5.2			
Unstructured SWL (h/sem)	72	Unstructured SWL (h/w)	4.0			
الحمل الدراسي غير المنتظم للطالب خلال الفصل	12	الحمل الدراسي غير المنتظم للطالب أسبو عيا	4.8			
Total SWL (h/sem)	j	150				
الحمل الدر اسي الكلي للطالب خلال الفصل		150				

	Module Evaluation					
تقييم المادة الدر اسية						
	Time/ NumberWeight (Marks)Week DueRelevant Learning Outcome					
Formative assessment	Quizzes	3	20% (20)	3,5, 10, 12, 14	LO #1, 2, 3, 4,5 and 7	
	Assignments	6	10% (10)	4, 8, 12	LO # 1, 2, 3, 4, 5 and 6	
	Home Work	6	10% (10)	2,5,7 <mark>,9,11,13</mark>	LO # 1, 2, 3, 4, 5,6 and 7	
Summative assessment	Midterm Exam	2 hr.	10% (20)	7	LO # 1,4	
	Final Exam	3 hr.	50% (50)	16	All	
Total assessm	ent		100% (100 Marks)			

	Delivery Plan (Weekly Syllabus) المنهاج الأسبوعي النظري
	Material Covered
Week 1	Integration: . Definition, antiderivative, definite and indefinite integral
Week 2	Integration and transcendental functions: (trigonometric and inverse trigonometric functions, exponential and logarithmic functions)
Week 3	Integration and transcendental functions: Integration and transcendental functions (hyperbolic and inverse hyperbolic functions)
Week 4	• Numerical integration Introduction, trapezoidal rule and Simpson's rule
Week 5	Methods of integration Substitution method, integration by parts
Week 6	Methods of integration Trigonometric substitution method
Week 7	Methods of integration Integration by partial fraction method.
Week 8	• Application of definite integrals Areas under the curve, area between curves,
Week 9	Application of definite integrals Volume by revolution
Week 10	• Application of definite integrals Length of curve in the plane, Area of surface of revolution
Week 11	Application of definite integrals Center of mass, moment of inertia
Week 12	Application of definite integrals Area by polar coordinates
Week 13	• Matrix Definition, matrix algebra
Week 14	• Matrix Determinant of matrix, Grammar's rule
Week 15	• Matrix Inverse of matrix, Gauss Elimination Method
Week 16	Final Exam

	Learning and Teaching Resources مصادر التعلم والتدريس	
	Text	Available in the Library?
Required Texts	George B. Thomas and Ross L. Finney, "Calculus and Analytic Geometry, Addison- Wesley	Yes
Recommended Texts	Thomas Calculus, by George B. Thomas, Jr, Eleventh Edition Media Upgrade 2008 Calculus Early Transcendental (Sixth Edition) James Stewart	Yes

GRADING SCHEME مخطط الدر جات					
Group	Grade	التقدير	Marks (%)	Definition	
Success Group (50 - 100)	A - Excellent	امتياز	90 - 100	Outstanding Performance	
	B - Very Good	<mark>جيد</mark> جدا	80 - 89	Above average with some errors	
	C - Good	جيد	70 - 79	Sound work with notable errors	
	D - Satisfactory	متوسط	60 - 69	Fair but with major shortcomings	
	E - Sufficient	مقبول	50 - 59	Work meets minimum criteria	
Fail Group	FX – Fail	مقبول بقرار	(45-49)	More work required but credit awarded	
(0 - 49)	F – Fail	راسب	(0-44)	Considerable amount of work required	
Note:		1			

NB Decimal places above or below 0.5 will be rounded to the higher or lower full mark (for example a mark of 54.5 will be rounded to 55, whereas a mark of 54.4 will be rounded to 54. The University has a policy NOT to condone "near-pass fails" so the only adjustment to marks awarded by the original marker(s) will be the automatic rounding outlined above.
